

## SNx4AHC540 Octal Buffers/Drivers With 3-State Outputs

### 1 Features

- Operating Range 2-V to 5.5-V  $V_{CC}$
- Latch-Up Performance Exceeds 250 mA Per JESD 17
- On Products Compliant to MIL-PRF-38535, All Parameters Are Tested Unless Otherwise Noted. On All Other Products, Production Processing Does Not Necessarily Include Testing of All Parameters.

### 2 Applications

- Servers
- PCs and Notebooks
- Network Switches
- Wearable Health and Fitness Devices
- Telecom Infrastructures
- Electronic Points of Sale

### 3 Description

The SNx4AHC540 octal buffers/drivers are ideal for driving bus lines or buffer memory address registers. These devices feature inputs and outputs on opposite sides of the package to facilitate printed circuit board layout.

#### Device Information<sup>(1)</sup>

| PART NUMBER   | PACKAGE (PINS) | BODY SIZE (NOM)    |
|---------------|----------------|--------------------|
| SN74AHC540N   | PDIP (20)      | 25.40 mm × 6.35 mm |
| SN74AHC540DB  | SSOP (20)      | 7.50 mm × 5.30 mm  |
| SN74AHC540PW  | TSSOP (20)     | 6.50 mm × 4.40 mm  |
| SN74AHC540DGV | TVSOP (20)     | 5.00 mm × 4.40 mm  |
| SN74AHC540DW  | SOIC (20)      | 12.80 mm × 7.50 mm |
| SNJ54AHC540FK | LCCC (20)      | 9.0 mm × 9.0 mm    |
| SNJ54AHC540W  | CFP (20)       | 13.72 mm × 8.13 mm |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

#### Simplified Schematic

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

| <b>Changes from Revision L (October 2015) to Revision M</b>                         | <b>Page</b> |
|---|-------------|
| • Updated front page Simplified Schematic diagram .....                             | 1           |
| • Updated Pin Out drawing diagrams to new standard .....                            | 4           |
| • Updated Functional Block Diagram .....  | 10          |
| • Updated Outputs in Function Table of <i>Device Functional Modes</i> section ..... | 10          |

| <b>Changes from Revision K (September 2014) to Revision L</b>  | <b>Page</b> |
|--|-------------|
| • Added junction temperature .....   | 5           |
| • Updated the <i>Handling Ratings</i> table to an <i>ESD Ratings</i> table and move the storage temperature to the <i>Absolute Maximum Ratings</i> table ..... | 5           |
| • Corrected the <i>Overview</i> to state that the outputs provide non-inverted data .....  | 10          |
| • Added <a href="#">Community Resources</a> .....  | 13          |

| <b>Changes from Revision J (July 2003) to Revision K</b>                                     | <b>Page</b> |
|--|-------------|
| • Updated document to new TI data sheet format .....   | 1           |
| • Deleted Ordering Information table .....   | 1           |
| • Added Military Disclaimer to Features list .....   | 1           |
| • Added <i>Applications</i> .....  | 1           |
| • Updated the simplified schematic .....   | 1           |
| • Added <i>Pin Functions</i> table .....   | 4           |
| • Added <i>Handling Ratings</i> table .....  | 5           |
| • Extended operating temperature range to 125°C .....  | 5           |
| • Added Thermal Information table .....  | 6           |
| • Added –40°C to 125°C range for SN74AHC540 in <i>Electrical Characteristics</i> table ..... | 6           |

---

- Added  $T_A = -40^\circ\text{C}$  to  $125^\circ\text{C}$  for SN74AHC540 in both Switching Characteristics tables. .... 7
- Added Typical Characteristics. .... 8
- Added *Detailed Description* section..... 10
- Added *Application and Implementation* section..... 11
- Added *Power Supply Recommendations* and *Layout* sections. .... 12

---

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|   |                                     | MIN  | MAX                   | UNIT |    |
|---|-------------------------------------|--|-----------------------|------|----|
| V <sub>CC</sub>                                   | Supply voltage range                | -0.5   | 7                     | V    |    |
| V <sub>I</sub>                                    | Input voltage range <sup>(2)</sup>  | -0.5   | 7                     | V    |    |
| V <sub>O</sub>                                    | Output voltage range <sup>(2)</sup> | -0.5   | V <sub>CC</sub> + 0.5 | V    |    |
| I <sub>IK</sub>                                   | Input clamp current                 | V <sub>I</sub> < 0                                     |                       | -20  | mA |
| I <sub>OK</sub>                                   | Output clamp current                | V <sub>O</sub> < 0 or V <sub>O</sub> > V <sub>CC</sub> |                       | ±20  | mA |
| I <sub>O</sub>                                    | Continuous output current           | V <sub>O</sub> = 0 to V <sub>CC</sub>                  |                       | ±25  | mA |
| Continuous current through V <sub>CC</sub> or GND |                                     |  |                       | ±75  | mA |
| T <sub>J</sub>                                    | Junction temperature                |  | 150                   | °C   |    |
| T <sub>stg</sub>                                  | Storage temperature                 | -65  | 150                   | °C   |    |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

### 6.2 ESD Ratings

|                    |                         | VALUE  | UNIT |   |
|--------------------|-------------------------|--|------|---|
| V <sub>(ESD)</sub> | Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>              | 1000 | V |
|                    |                         | Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup> | 2000 |   |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                 |                                    | SN54AHC540                      |                 | SN74AHC540 |                 | UNIT |
|-----------------|------------------------------------|---------------------------------|-----------------|------------|-----------------|------|
|                 |                                    | MIN                             | MAX             | MIN        | MAX             |      |
| V <sub>CC</sub> | Supply voltage                     | 2                               | 5.5             | 2          | 5.5             | V    |
| V <sub>IH</sub> | High-level input voltage           | V <sub>CC</sub> = 2 V           |                 | 1.5        |                 | V    |
|                 |                                    | V <sub>CC</sub> = 3 V           |                 | 2.1        |                 |      |
|                 |                                    | V <sub>CC</sub> = 5.5 V         |                 | 3.85       |                 |      |
| V <sub>IL</sub> | Low-level Input voltage            | V <sub>CC</sub> = 2 V           |                 | 0.5        |                 | V    |
|                 |                                    | V <sub>CC</sub> = 3 V           |                 | 0.9        |                 |      |
|                 |                                    | V <sub>CC</sub> = 5.5 V         |                 | 1.65       |                 |      |
| V <sub>I</sub>  | Input voltage                      | 0                               | 5.5             | 0          | 5.5             | V    |
| V <sub>O</sub>  | Output voltage                     | 0                               | V <sub>CC</sub> | 0          | V <sub>CC</sub> | V    |
| I <sub>OH</sub> | High-level output current          | V <sub>CC</sub> = 2 V           |                 | -50        |                 | μA   |
|                 |                                    | V <sub>CC</sub> = 3.3 V ± 0.3 V |                 | -4         |                 | mA   |
|                 |                                    | V <sub>CC</sub> = 5 V ± 0.5 V   |                 | -8         |                 | mA   |
| I <sub>OL</sub> | Low-level output current           | V <sub>CC</sub> = 2 V           |                 | 50         |                 | μA   |
|                 |                                    | V <sub>CC</sub> = 3.3 V ± 0.3 V |                 | 4          |                 | mA   |
|                 |                                    | V <sub>CC</sub> = 5 V ± 0.5 V   |                 | 8          |                 | mA   |
| Δt/Δv           | Input transition rise or fall rate | V <sub>CC</sub> = 3.3 V ± 0.3 V |                 | 100        |                 | ns/V |
|                 |                                    | V <sub>CC</sub> = 5 V ± 0.5 V   |                 | 20         |                 |      |
| T <sub>A</sub>  | Operating free-air temperature     | -55                             | 125             | -40        | 125             | °C   |

- (1) All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs (SCBA004)*.

## 7 Parameter Measurement Information

VOLTAGE WAVEFORMS  
PULSE DURATION

VOLTAGE WAVEFORMS  
SETUP AND HOLD TIMES

VOLTAGE WAVEFORMS  
PROPAGATION DELAY TIMES  
INVERTING AND NONINVERTING OUTPUTS

VOLTAGE WAVEFORMS  
ENABLE AND DISABLE TIMES  
LOW- AND HIGH-LEVEL ENABLING

- NOTES: A.  $C_L$  includes probe and jig capacitance.  
 B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.  
 C. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 1\text{ MHz}$ ,  $Z_O = 50\ \Omega$ ,  $t_r \leq 3\text{ ns}$ ,  $t_f \leq 3\text{ ns}$ .  
 D. The outputs are measured one at a time with one input transition per measurement.  
 E. All parameters and waveforms are not applicable to all devices.

Figure 3. Load Circuit and Voltage Waveforms

## 8 Detailed Description

### 8.1 Overview

The SNx4AHC540 octal buffers/drivers are ideal for driving bus lines or buffer memory address registers. These devices feature inputs and outputs on opposite sides of the package to facilitate printed circuit board layout.

The 3-state control gate is a two-input AND gate with active-low inputs. If either output-enable ( $\overline{OE1}$  or  $\overline{OE2}$ ) input is high, all corresponding outputs are in the high-impedance state. The outputs provide inverted data when they are not in the high-impedance state.

$\overline{OE}$  should be tied to  $V_{CC}$  through a pullup resistor to ensure the high-impedance state during power up or power down. The minimum value of the resistor is determined by the current-sinking capability of the driver.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

SNx4AHC540 device has a wide operating voltage range and operates from 2 V to 5.5 V. The inputs accept voltages up to 5.5 V, which allows for down translation. Slow input edges and low drive will minimize output overshoots and undershoots.

### 8.4 Device Functional Modes

[Table 1](#) shows the device functions for each buffer and driver.

**Table 1. Function Table (Each Buffer/Driver)**

| INPUTS           |                  |   | OUTPUT<br>Y |
|------------------|------------------|---|-------------|
| $\overline{OE1}$ | $\overline{OE2}$ | A |             |
| L                | L                | L | H           |
| L                | L                | H | L           |
| H                | X                | X | Hi-Z        |
| X                | H                | X | Hi-Z        |

## 9 Application and Implementation

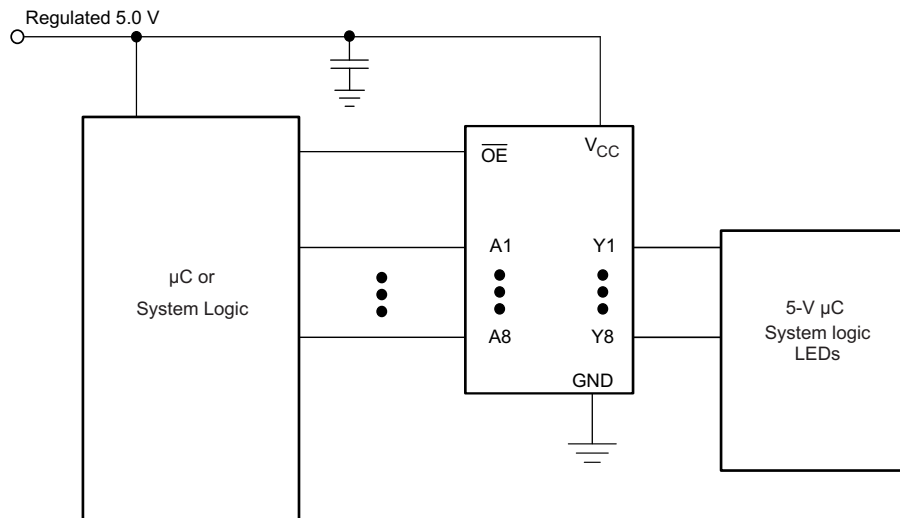

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The SN74AHC540 is a low drive CMOS device that can be used for a multitude of bus interface type applications where output ringing is a concern. The low drive and slow edge rates will minimize overshoot and undershoot on the outputs. The inputs accept voltages up to 5.5 V, which allows down translation to the  $V_{CC}$  level. Figure 5 shows how the slower edges can reduce ringing on the output compared to higher drive parts like AC.

### 9.2 Typical Application

**Figure 4. Typical Application Schematic**

#### 9.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. Care should be taken to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads so routing and load conditions should be considered to prevent ringing.

#### 9.2.2 Detailed Design Procedure

1. Recommended Input Conditions:
  - For rise time and fall time specifications, see  $\Delta t/\Delta V$  in the [Recommended Operating Conditions](#) table.
  - For specified high and low levels, see  $V_{IH}$  and  $V_{IL}$  in the [Recommended Operating Conditions](#) table.
  - Inputs are overvoltage tolerant allowing them to go as high as 5.5 V at any valid  $V_{CC}$ .
2. Recommended Output Conditions:
  - Load currents should not exceed 25 mA per output and 75 mA total for the part.
  - Outputs should not be pulled above  $V_{CC}$ .

## Typical Application (continued)

### 9.2.3 Application Curve

**Figure 5. Switching Characteristics Comparison**

## 10 Power Supply Recommendations

The power supply can be any voltage between the MIN and MAX supply voltage rating located in the [Recommended Operating Conditions](#) table. Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, 0.1  $\mu\text{F}$  is recommended. If there are multiple  $V_{CC}$  terminals then 0.01  $\mu\text{F}$  or 0.022  $\mu\text{F}$  is recommended for each power terminal. It is acceptable to parallel multiple bypass caps to reject different frequencies of noise. A 0.1  $\mu\text{F}$  and 1  $\mu\text{F}$  are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

### 10.1 Layout Guidelines

When using multiple bit logic devices, inputs should not float. In many cases, functions or parts of functions of digital logic devices are unused. Some examples are when only two inputs of a triple-input AND gate are used, or when only 3 of the 4-buffer gates are used. Such input pins should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. Specified in the [Figure 6](#) are rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that should be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or  $V_{CC}$ , whichever makes more sense or is more convenient. It is acceptable to float outputs unless the part is a transceiver. If the transceiver has an output enable pin, it will disable the outputs section of the part when asserted. This will not disable the input section of the I/Os so they also cannot float when disabled.

## 11 Layout

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of  $\leq 1000$ ppm threshold. Antimony trioxide based flame retardants must also meet the  $\leq 1000$ ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

W (R-GDFP-F20)

CERAMIC DUAL FLATPACK

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. This package can be hermetically sealed with a ceramic lid using glass frit.
  - D. Index point is provided on cap for terminal identification only.
  - E. Falls within Mil-Std 1835 GDFP2-F20

PW0020A

# PACKAGE OUTLINE

## TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

4220206/A 02/2017

### NOTES:

- All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
- This drawing is subject to change without notice.
- This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
- This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
- Reference JEDEC registration MO-153.

# EXAMPLE BOARD LAYOUT

PW0020A

TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE: 10X

SOLDER MASK DETAILS

4220206/A 02/2017

NOTES: (continued)

- 6. Publication IPC-7351 may have alternate designs.
- 7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

PW0020A

TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

SOLDER PASTE EXAMPLE  
BASED ON 0.125 mm THICK STENCIL  
SCALE: 10X

4220206/A 02/2017

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

PW (R-PDSO-G20)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate design.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.
