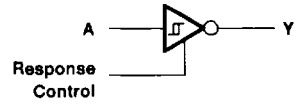
logic diagram (each receiver)



description

The SN65C189, SN65C189A, SN75C189, and SN75C189A are low-power bipolar quadruple line receivers that are used to interface data terminal equipment (DTE) with data circuit-terminating equipment (DCE). These devices have been designed to conform with ANSI Standard EIA/TIA-232-E.

The SN65C189 and SN75C189 have a 0.33 V typical hysteresis compared with 0.97 V for the SN65C189A and SN75C189A. Each receiver has provision for adjustment of the overall input threshold levels. This is achieved by choosing external series resistors and voltages to provide bias levels for the response control pins. The output is in the high logic state if the input is left open circuited or shorted to ground.

These devices have an on-chip filter that rejects input pulses of shorter than 1-μs minimum duration. An external capacitor may be connected from the control pins to ground to provide further input noise filtering for each receiver.

The SN65C189, SN75C189, SN65C189A, and SN75C189A have been designed using low-power techniques in a bipolar technology. In most applications, these receivers will interface to single inputs of peripheral devices such as UARTs, ACEs, or microprocessors. By using sampling, such peripheral devices are usually insensitive to the transition times of the input signals. If this is not the case or for other uses, it is recommended that the SN65C189, SN75C189, SN65C189A, and SN75C189A outputs be buffered by single Schmitt input gates or single gates of the HCMOS, ALS, or 74F logic families.

The SN65C189 and SN65C189A are characterized for operation from −40°C to 85°C. The SN75C189 and SN75C189A are characterized for operation from 0°C to 70°C.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage, V_{CC} (see Note 1) ..... 7 V
Input voltage range, V_I ..... −30 V to 30 V
Output voltage range, V_O ..... −0.3 V to V_{CC} + 0.3 V
Continuous total dissipation ..... See Dissipation Rating Table
Operating free-air temperature range, T_A: SN65C189, SN65C189A ..... −40°C to 85°C
SN75C189, SN75C189A ..... 0°C to 70°C
Storage temperature range, T_{stg} ..... −65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds ..... 260°C

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltages are with respect to the network ground terminal.
