4-BIT D-TYPE REGISTER (With 3-State Outputs)

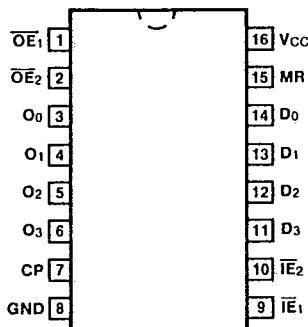

DESCRIPTION — The '173 is a high speed 4-bit register featuring 3-state outputs for use in bus-organized systems. The clock is fully edge-triggered allowing either a load from the D inputs or a hold (retain register contents) depending on the state of the Input Enable lines (\overline{IE}_1 , \overline{IE}_2). A HIGH on either Output Enable line (\overline{OE}_1 , \overline{OE}_2) brings the output to a high impedance state without affecting the actual register contents. A HIGH on the Master Reset (MR) input resets the register regardless of the state of the Clock (CP), the Output Enable (\overline{OE}_1 , \overline{OE}_2) or the Input Enable (\overline{IE}_1 , \overline{IE}_2) lines.

- FULLY EDGE-TRIGGERED
- 3-STATE OUTPUTS
- GATED INPUT AND OUTPUT ENABLES

When either \overline{OE}_1 or \overline{OE}_2 are HIGH, the output is in the OFF state (high impedance); however this does not affect the contents or sequential operating of the register.

H = HIGH Voltage Level
 L = LOW Voltage Level
 X = Immaterial
