## 16-Channel, 8-Channel, Differential 8-Channel and Differential 4-Channel, CMOS Analog MUXs with Active Overvoltage Protection

August 1997

### Features

- Analog Overvoltage ..... 70V<sub>p-p</sub>
- No Channel Interaction During Overvoltage
- Maximum Power Supply ..... 44V
- Fail Safe with Power Loss (No Latch-Up)
- Break-Before-Make Switching
- Analog Signal Range..... ±15V
- Access Time 500ns
- Power Dissipation ..... 7.5mW

### Applications

- Data Acquisition Systems
- Industrial Controls
- Telemetry

### Ordering Information

| PART NUMBER | TEMP. RANGE (°C)              | PACKAGE      | PKG. NO. |
|-------------|-------------------------------|--------------|----------|
| HI1-0506A-2 | -55 to 125                    | 28 Ld CERDIP | F28.6    |
| HI1-0506A-5 | 0 to 75                       | 28 Ld CERDIP | F28.6    |
| HI1-0506A-8 | -55 to 125 + 160 Hour Burn-In | 28 Ld CERDIP | F28.6    |

| HI1-0509A-8 | -55 to 125 + 160 Hour Burn-In | 16 Ld CERDIP | F16.3    |
| HI3-0509A-5 | 0 to 75                       | 16 Ld PDIP   | E16.3    |

### Description

The HI-506A, HI-507A, HI-508A and HI-509A are analog multiplexers with active overvoltage protection. Analog input levels may greatly exceed either power supply without damaging the device or disturbing the signal path of other channels. Active protection circuitry assures that signal fidelity is maintained even under fault conditions that would destroy other multiplexers. Analog inputs can withstand constant 70V<sub>p-p</sub> levels with ±15V supplies. Digital inputs will also sustain continuous faults up to 4V greater than either supply. In addition, signal sources are protected from short circuiting should multiplexer supply loss occur. Each input presents 1kΩ of resistance under this condition. These features make the HI-506A, HI-507A, HI-508A and HI-509A ideal for use in systems where the analog inputs originate from external equipment, or separately powered circuitry. All devices are fabricated with 44V dielectrically isolated CMOS technology. The HI-506A is a single 16 channel multiplexer, the HI-507A is an 8-Channel differential multiplexer, the HI-508A is a single 8 channel multiplexer and the HI-509A is a differential 4-Channel multiplexer. If input overvoltage protection is not needed the HI-506/507/508/509 multiplexers are recommended. For further information see Application Notes AN520 and AN521.

The HI-506A/507A devices are available in a 28 lead Plastic or Ceramic DIP and the HI-508A/509A devices are available in a 16 lead Plastic or Ceramic DIP package.

The HI-50XA are offered in industrial/commercial and military grades, additional Hi-Rel screening including 160 hour burn-in is specified by the "8" suffix. For MIL-STD-883 compliant parts, request the HI-546/883, HI-547/883, HI-548/883 or HI-549/883 data sheets.

| Maximum Lead Temperature (Soldering 10s) ..... |                      | 300°C                |

## Operating Conditions

### Temperature Ranges

|                                    |                |
|------------------------------------|----------------|
| HI-506A/507A/508A/509A-2, -8 ..... | -55°C to 125°C |
| HI-506A/507A/508A/509A-5, -7 ..... | 0°C to 75 °C   |

**CAUTION:** Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

### NOTE:

- $\theta_{JA}$  is measured with the component mounted on an evaluation PC board in free air.

## Electrical Specifications

Supplies = +15V, -15V; V<sub>REF</sub> Pin = Open; V<sub>AH</sub> (Logic Level High) = +4V; V<sub>AL</sub> (Logic Level Low) = +0.8V, Unless Otherwise Specified. For Test Conditions, Consult Performance Curves

**NOTES:**

2. 100% tested for Dash 8. Leakage currents not tested at -55°C.
3.  $V_{OUT} = \pm 10V$ ,  $I_{OUT} = \bar{+}100\mu A$ .
4. 10nA is the practical lower limit for high speed measurement in the production test environment.
5. Analog Overvoltage =  $\pm 33V$ .
6. Digital input leakage is primarily due to the clamp diodes (see Schematic). Typical leakage is less than 1nA at 25°C.
7.  $V_{EN} = 0.8V$ ,  $R_L = 1K$ ,  $C_L = 15pF$ ,  $V_S = 7V_{RMS}$ ,  $f = 100kHz$ .
8.  $V_{EN}$ ,  $V_A = 0V$  or 4V.
9. To drive from DTL/TTL Circuits, 1k $\Omega$  pull-up resistors to +5V supply are recommended.
10.  $V_{REF} = +10V$ .

## Die Characteristics

### DIE DIMENSIONS:

159 mils x 83.9 mils x 19 mils

### METALLIZATION:

Type: CuAl

Thickness:  $16\text{k}\text{\AA} \pm 2\text{k}\text{\AA}$

### SUBSTRATE POTENTIAL (NOTE):

$-V_{\text{SUPPLY}}$

### PASSIVATION:

Silox:  $12\text{k}\text{\AA} \pm 2\text{k}\text{\AA}$

Nitride:  $3.5\text{k}\text{\AA} \pm 1\text{k}\text{\AA}$

NOTE: The substrate appears resistive to the  $-V_{\text{SUPPLY}}$  terminal, therefore it may be left floating (Insulating Die Mount) or it may be mounted on a conductor at  $-V_{\text{SUPPLY}}$  potential.

### WORST CASE CURRENT DENSITY:

$1.4 \times 10^5 \text{ A/cm}^2$

### TRANSISTOR COUNT:

485

### PROCESS:

CMOS-DI
