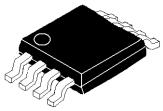
TS922, TS922A

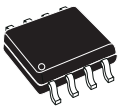
Rail-to-rail, high output current dual operational amplifier

Datasheet - production data

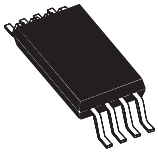
J
Flip-chip with backcoating



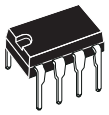
MiniSO8
(plastic micropackage)



D
SO8
(plastic micropackage)



P
TSSOP8
(thin shrink small outline package)



N
DIP8
(plastic package)

Features

- Rail-to-rail input and output
- Low noise: 9 nV/$\sqrt{Hz}$
- Low distortion
- High output current: 80 mA (able to drive 32 Ω loads)
- High-speed: 4 MHz, 1 V/µs
- Operating from 2.7 to 12 V
- Low input offset voltage: 900 µV max. (TS922A)
- ESD internal protection: 2 kV
- Latch-up immunity
- Macromodel included in this specification
- Dual version available in Flip-chip package

Applications

- Headphone and servo amplifiers
- Sound cards, multimedia systems
- Line drivers, actuator drivers
- Mobile phones and portable equipment
- Instrumentation with low noise as key factor
- Piezoelectric speaker drivers

Description

TS922 and TS922A devices are rail-to-rail dual BiCMOS operational amplifiers optimized and fully specified for 3 V and 5 V operation. These devices have high output currents which allow low-load impedances to be driven.

Very low noise, low distortion, low offset, and a high output current capability make these devices an excellent choice for high quality, low voltage, or battery operated audio systems.

The devices are stable for capacitive loads up to 500 pF.

Contents

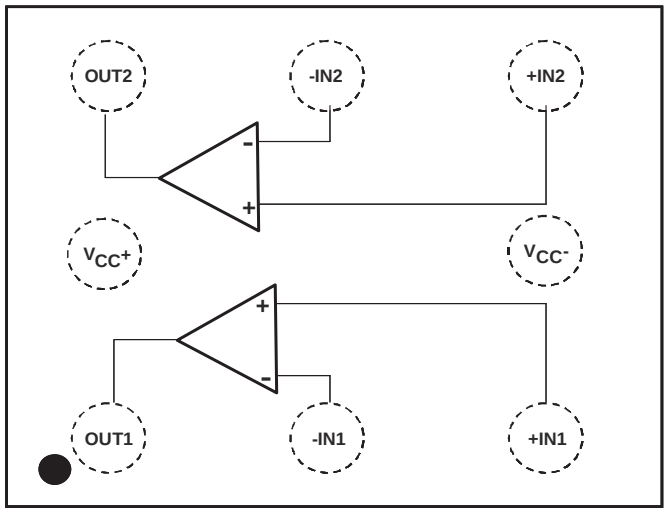

Figure 2. Pin connections for MiniSO8, SO8, TSSOP8, and DIP8 (top view)

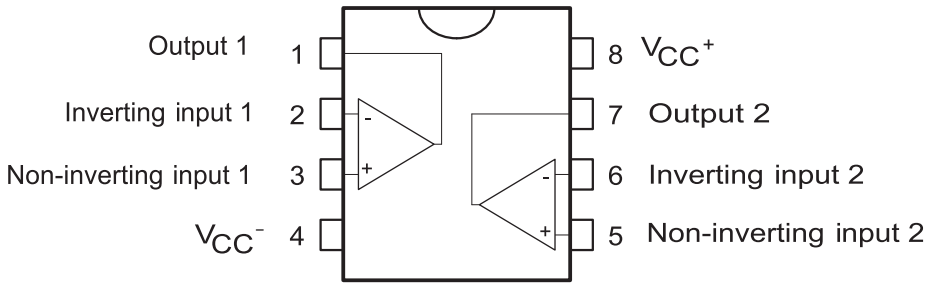

2 Absolute maximum ratings and operating conditions

Table 1. Absolute maximum ratings (AMR)

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage(1)	14	V
V_{id}	Differential input voltage(2)	±1	
V_{in}	Input voltage(3)	V_{CC-} -0.3 to V_{CC+}+0.3	
T_{stg}	Storage temperature	-65 to +150	°C
R_{thja}	Thermal resistance junction to ambient(4) Flip-chip SO8 TSSOP8	 90 125 120	°C/W
R_{thjc}	Thermal resistance junction to case(4) SO8 TSSOP8	 40 37	
T_j	Maximum junction temperature	150	°C
ESD	HBM: human body model(5) MM: machine model(6) CDM: charged device model(7)	2000 120 1500	V
	Output short-circuit duration	See note(8)	
	Latch-up immunity	200	mA
	Soldering temperature (10 s), leaded version Soldering temperature (10 s), unleaded version	250 260	°C

1. All voltage values, except differential voltage are with respect to network ground terminal.
2. The differential voltage is the non-inverting input terminal with respect to the inverting input terminal. If V_{id} > ±1 V, the maximum input current must not exceed ±1 mA. In this case (V_{id} > ±1 V), an input series resistor must be added to limit the input current.
3. Do not exceed 14 V.
4. Short-circuits can cause excessive heating. Destructive dissipation can result from simultaneous short-circuits on all amplifiers. These values are typical.
5. Human body model: 100 pF discharged through a 1.5 kΩ resistor between two pins of the device, done for all couples of pin combinations with other pins floating.
6. Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω). This is done for all couples of pin combinations with other pins floating.
7. Charged device model: all pins and plus package are charged together to the specified voltage and then discharged directly to ground.
8. There is no short-circuit protection inside the device: short-circuits from the output to V_{CC} can cause excessive heating. The maximum output current is approximately 80 mA, independent of the magnitude of V_{CC}. Destructive dissipation can result from simultaneous short-circuits on all amplifiers.

Table 2. Operating conditions

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage	2.7 to 12	V
V_{icm}	Common mode input voltage range	V_{CC-} -0.2 to V_{CC+} +0.2	
T_{oper}	Operating free air temperature range	-40 to +125	°C

3 Electrical characteristics

Table 3. Electrical characteristics measured at V_{CC} = +3 V, V_{CC}- = 0 V, V_{icm} = V_{CC}/2, T_{amb} = 25 °C, and R_L connected to V_{CC}/2 (unless otherwise specified)

4 TS922, TS922A macromodel

4.1 Important note concerning this macromodel

- All models are a trade-off between accuracy and complexity (i.e. simulation time).
- Macromodels are not a substitute to breadboarding; rather, they confirm the validity of a design approach and help to select surrounding component values.
- A macromodel emulates the **nominal** performance of a **typical** device within **specified operating conditions** (for example, temperature and supply voltage). Thus the macromodel is often not as exhaustive as the datasheet, its purpose is to illustrate the main parameters of the product.

Data derived from macromodels used outside of the specified conditions (for example, V_{CC}, temperature) or worse, outside of the device operating conditions (for example, V_{CC}, V_{icm}), are not reliable in any way.

Section 4.2 provides the electrical characteristics resulting from the use of the TS922, TS922A macromodel.

4.2 Electrical characteristics from macromodelization

Table 5. Electrical characteristics resulting from macromodel simulation at V_{CC} = 3 V, V_{CC}- = 0 V, R_L, C_L connected to V_{CC}/2, T_{amb} = 25 °C (unless otherwise specified)

Symbol	Conditions	Value	Unit
V_{io}		0	mV
A_{vd}	R_L = 10 kΩ	200	V/mV
I_{CC}	No load, per operator	1.2	mA
V_{icm}		-0.2 to 3.2	V
V_{OH}	R_L = 10 kΩ	2.95	
V_{OL}		25	mV
I_{sink}	V_O = 3 V	80	mA
I_{source}	V_O = 0 V		
GBP	R_L = 600 kΩ	4	MHz
SR	R_L = 10 kΩ, C_L = 100 pF	1.3	V/µs
ϕm	R_L = 600 kΩ	68	Degrees

01-Feb-2001	1	First release.
01-Jul-2004	2	Flip-chip package inserted in the document.
02-May-2005	3	Modifications in AMR *Table 1 on page 4* (explanation of V_{id} and V_i limits, ESD MM and CDM values added, R_{thja} added).
01-Aug-2005	4	PPAP references inserted in the datasheet, see *Table 6 on page 22*.
01-Mar-2006	5	TS922EIJT part number inserted in the datasheet, see *Table 6 on page 22*.
26-Jan-2007	6	Modifications in AMR *Table 1 on page 4* (R_{thjc} added), parameter limits on full temperature range added in *Table 3 on page 6* and *Table 4 on page 8*.
12-Nov-2007	7	Added notes on ESD in AMR table. Re-formatted package information. Added notes for automotive grade in order codes table.
02-Feb-2010	8	Document reformatted. Added root part number TS922A on cover page. Removed TS922AIYD order code from *Table 10*.
15-Jan-2013	9	Added MiniSO8 package. Modified test conditions for CMR in *Table 3* and *Table 4*. Replaced V_{DD} by V_{CC-} in title of *Table 3*, *Table 4*, and *Table 5*. Updated titles of *Figure 7* to *Figure 12* (added conditions to differentiate them). Removed TS922IYD device from *Table 10*. Minor corrections throughout document.
04-Jun-2013	10	*Features*: updated package information for Flip-chip *Figure 2*: Updated title *Table 1*: updated footnotes *5*, *6*, and *7* *Table 3* and *Table 4*: replaced DV_{io} with $\Delta V_{io}/\Delta T$ *Figure 14*: added backcoating to package information *Figure 16*: updated footnote *3* *Table 10*: updated package information for Flip-chip
27-Jun-2013	11	*Figure 14*: updated to include new height for backcoating
