

**MAXIM**

# Low-Voltage, Quad, SPST CMOS Analog Switches

## General Description

The MAX4610/MAX4611/MAX4612 are quad, low-voltage, single-pole/single-throw (SPST) analog switches. On-resistance ( $100\Omega$ , max) is matched between switches to  $4\Omega$ , max and is flat ( $4\Omega$ , max) over the specified signal range. Each switch handles V+ to GND analog signal levels. Maximum off-leakage current is only 1nA at  $T_A = +25^\circ C$  and 2nA at  $T_A = +85^\circ C$ .

The MAX4610 has four normally open (NO) switches, and the MAX4611 has four normally closed (NC) switches. The MAX4612 has two NO switches and two NC switches. These CMOS switches operate from a single +2V to +12V supply. All digital inputs have +0.8V and +2.4V logic thresholds, ensuring TTL/CMOS-logic compatibility when using a single +5V supply.

## Applications

- Battery-Operated Equipment
- Audio/Video Signal Routing
- Low-Voltage Data-Acquisition Systems
- Sample-and-Hold Circuits
- Communication Circuits

## Features

- ◆ Offered in Automotive Temperature Range (-40°C to +125°C)
- ◆ Guaranteed On-Resistance 100Ω max (5V Supply)  
46Ω max (12V Supply)
- ◆ Guaranteed Match Between Channels (4Ω, max)
- ◆ Guaranteed Flatness Over Signal Range (18Ω, max)
- ◆ Off-Leakage Current Over Temperature <2nA at  $T_A = +85^\circ C$
- ◆ >2kV ESD Protection per Method 3015.7
- ◆ Rail-to-Rail® Signal Handling
- ◆ TTL/CMOS-Logic Compatible

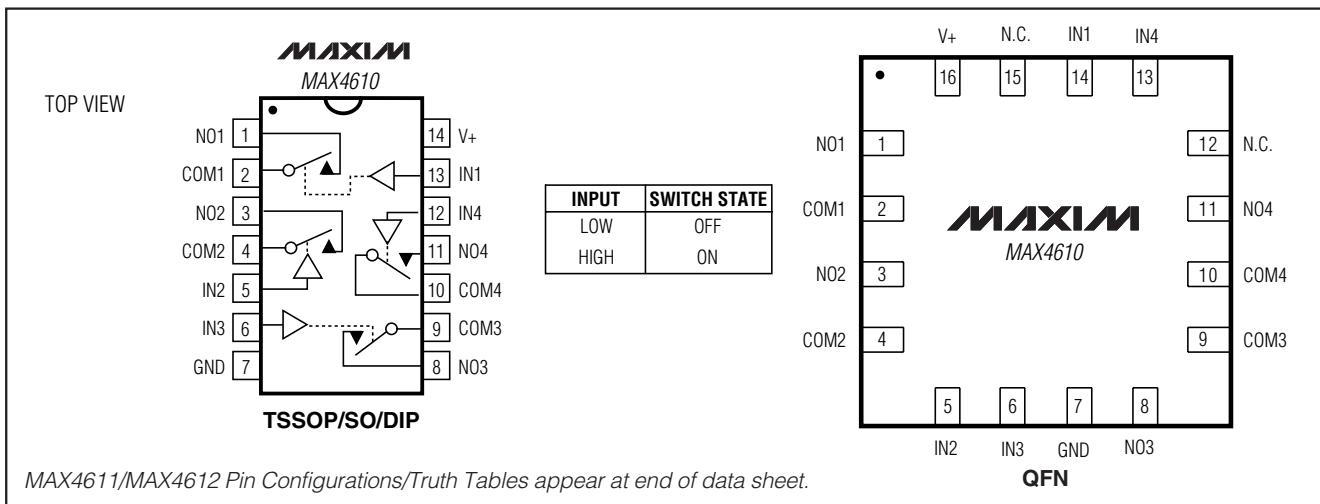

## Ordering Information

| PART       | TEMP RANGE      | PIN-PACKAGE    |
|------------|-----------------|----------------|
| MAX4610CUD | 0°C to +70°C    | 14 TSSOP       |
| MAX4610CSD | 0°C to +70°C    | 14 Narrow SO   |
| MAX4610CPD | 0°C to +70°C    | 14 Plastic DIP |
| MAX4610C/D | 0°C to +70°C    | Dice*          |
| MAX4610EGE | -40°C to +85°C  | 16 QFN         |
| MAX4610EUD | -40°C to +85°C  | 14 TSSOP       |
| MAX4610ESD | -40°C to +85°C  | 14 Narrow SO   |
| MAX4610EPD | -40°C to +125°C | 14 Plastic DIP |

*Ordering Information continued at end of data sheet.*

## ABSOLUTE MAXIMUM RATINGS

(Voltages referenced to GND)

|  |                                  |
|--|----------------------------------|
| V <sub>+</sub>   | -0.3V to +13V                    |
| I <sub>N</sub> , I <sub>NO</sub> , I <sub>NC</sub> (Note 1)          | -0.3V to (V <sub>+</sub> + 0.3V) |
| Continuous Current (any terminal)<br>(pulsed at 1ms, 10% duty cycle) | 20mA                             |
| Peak Current (any terminal)<br>(pulsed at 1ms, 10% duty cycle)       | 40mA                             |
| ESD per Method 3015.7  | >2kV                             |

Continuous Power Dissipation (T<sub>A</sub> = +70°C)

|  |             |
|--|-------------|
| 14-Pin TSSOP (derate 6.3mW/°C above +70°C)         | .....500mW  |
| 14-Pin Narrow SO (derate 8.00mW/°C above +70°C)    | ..640mW     |
| 14-Pin Plastic DIP (derate 10.00mW/°C above +70°C) | ..800mW     |
| 16-Pin QFN (derate 18.5mW/°C above +70°C)          | .....1481mW |

Operating Temperature Ranges

|           |                      |
|-----------|----------------------|
| MAX461_C_ | .....0°C to +70°C    |
| MAX461_E_ | .....-40°C to +85°C  |
| MAX461_A_ | .....-40°C to +125°C |

Storage Temperature Range .....-65°C to +160°C

Lead Temperature (soldering, 10s) .....+300°C

**Note 1:** Signals on NO<sub>\_</sub>, NC<sub>\_</sub>, COM<sub>\_</sub>, or IN<sub>\_</sub> exceeding V<sub>+</sub> or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS—Single +5V Supply

(V<sub>+</sub> = +5V ± 10%, V<sub>IN\_H</sub> = 2.4V, V<sub>IN\_L</sub> = 0.8V, T<sub>A</sub> = T<sub>MIN</sub> to T<sub>MAX</sub>, unless otherwise noted.)

**Note 2:** The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.

**Note 3:** Guaranteed by design.

**Note 4:**  $\Delta R_{ON} = R_{ON}(\text{max}) - R_{ON}(\text{min})$ .

**Note 5:** Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal range.

**Note 6:** Leakage parameters are 100% tested at maximum-rated hot temperature and guaranteed by correlation at  $+25^\circ C$ .

**Note 7:** Off-Isolation =  $20\log_{10}(V_{COM\_}/V_{NO\_})$ ,  $V_{COM\_}$  = output,  $V_{NO\_}$  = input to off switch.

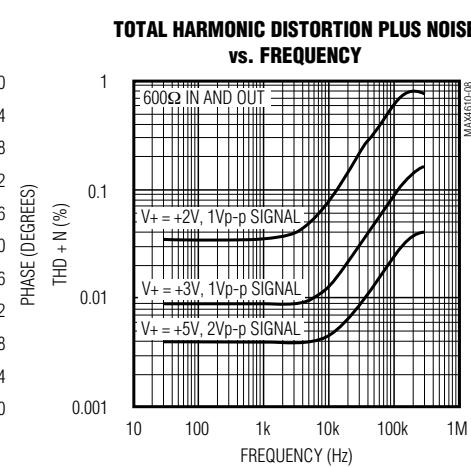

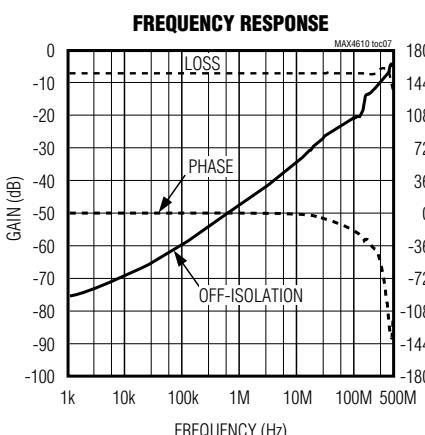

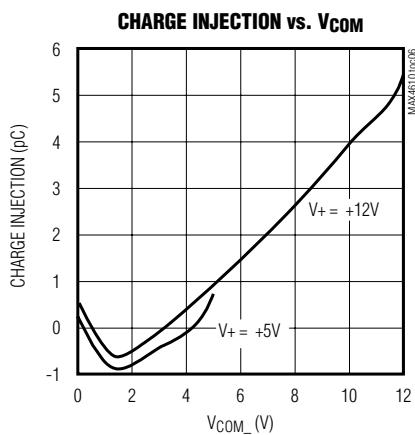

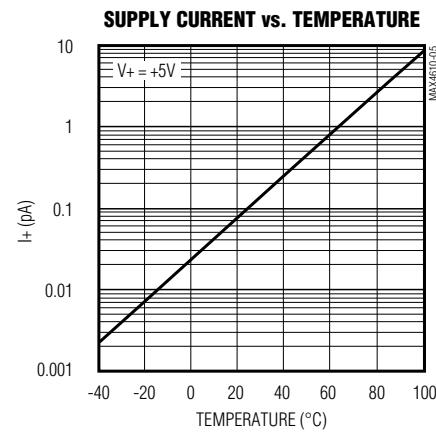

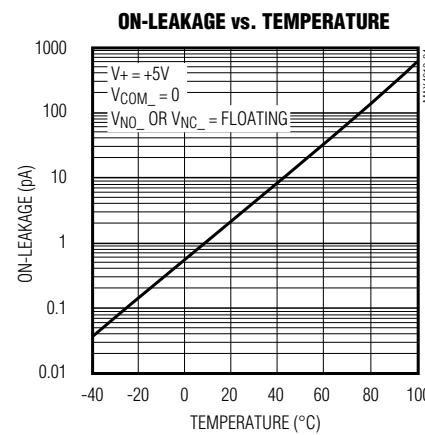

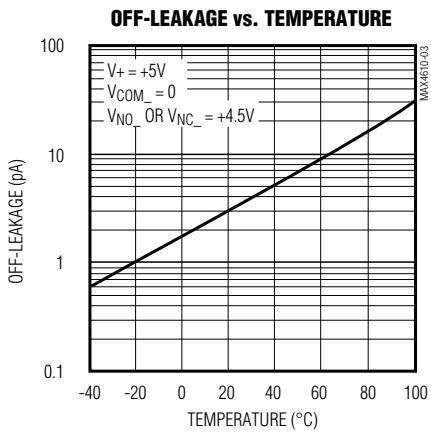

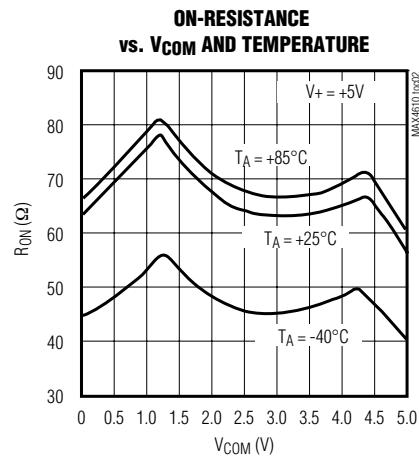

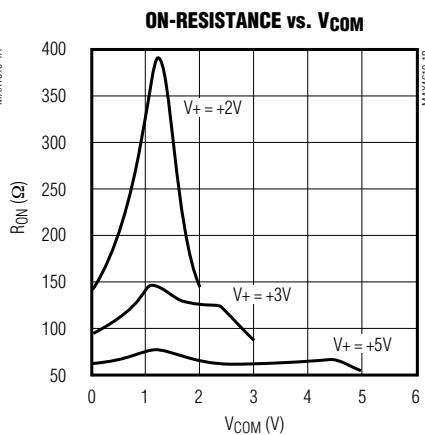

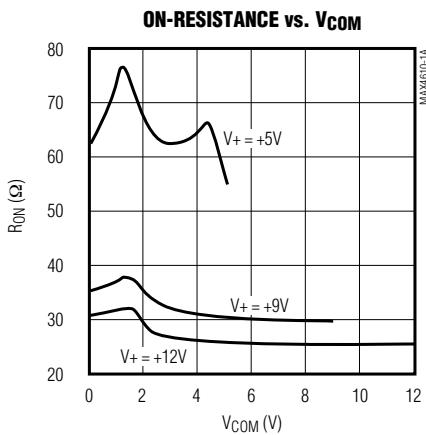

**Note 8:** Between any two switches.

## Applications Information

### Power-Supply Sequencing and Overvoltage Protection

Do not exceed the absolute maximum ratings, because stresses beyond the listed ratings may cause permanent damage to the devices.

Proper power-supply sequencing is recommended for all CMOS devices. Always apply V+ before applying analog signals or logic inputs, especially if the analog or logic signals are not current limited. If this sequencing is not possible, and if the analog or logic inputs are not current limited to 20mA, add a small-signal diode (D1) as shown in Figure 1. If the analog signal can dip below GND, add D2. Adding protection diodes reduces the analog signal range to a diode drop (about 0.7V) below V+ (for D1), and to a diode drop above ground (for D2). Leakage is unaffected by adding the diodes. On-resistance increases by a small amount at low supply voltages. Maximum supply voltage (V+) must not exceed 13V.

Adding protection diodes causes the logic thresholds to be shifted relative to the power-supply rails. This can

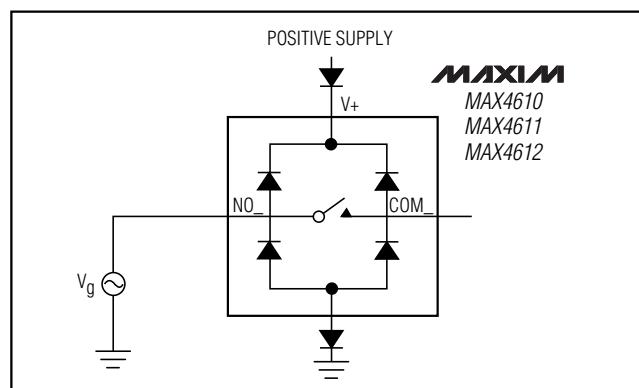

Figure 1. Overvoltage Protection Using Two External Blocking Diodes

be significant when low supply voltages (+5V or less) are used. With a +5V supply, TTL compatibility is not guaranteed when protection diodes are added. Driving IN1 and IN2 all the way to the supply rails (i.e., to a diode drop higher than the V+ pin, or to a diode drop lower than the GND pin) is always acceptable.

**MAX4610/MAX4611/MAX4612**

## Low-Voltage, Quad, SPST CMOS Analog Switches

Protection diodes D1 and D2 also protect against some overvoltage situations. With Figure 1's circuit, if the supply voltage is below the absolute maximum rating, and if a fault voltage up to the absolute maximum rating is applied to an analog signal pin, no damage will result.

### Operating Considerations for High-Voltage Supply

The MAX4610/MAX4611/MAX4612 are pin-compatible with the industry-standard 74HC4066 and the MAX4066, and are optimized for +5V single-supply operation. The MAX4610 family is capable of +12V sin-

gle-supply operation with some precautions. The absolute maximum rating for V+ is +13.2V (referenced to GND). When operating near this region, bypass V+ with a minimum 0.1 $\mu$ F capacitor to ground as close to the IC as possible.

**Caution: The absolute maximum V+ to V- differential voltage is 13.0V. Typical  $\pm 6V$  or 12V supplies with  $\pm 10\%$  tolerances can be as high as 13.2V. This voltage can damage the MAX4610/MAX4611/MAX4612. Even  $\pm 5\%$  tolerance supplies may have overshoot or noise spikes that exceed 13.0V.**

### NOTES:

1. DIE THICKNESS ALLOWABLE IS 0.305mm MAXIMUM (.012 INCHES MAXIMUM)
2. DIMENSIONING & TOLERANCES CONFORM TO ASME Y14.5M - 1994.
3. N IS THE NUMBER OF TERMINALS.
4. Nd IS THE NUMBER OF TERMINALS IN X-DIRECTION & Ne IS THE NUMBER OF TERMINALS IN Y-DIRECTION.
5. DIMENSION b APPLIES TO PLATED TERMINAL AND IS MEASURED BETWEEN 0.20 AND 0.25mm FROM TERMINAL TIP.
6. THE PIN #1 IDENTIFIER MUST BE EXISTED ON THE TOP SURFACE OF THE PACKAGE BY USING INDENTATION MARK OR INK/LASER MARKED. DETAILS OF PIN #1 IDENTIFIER IS OPTIONAL, BUT MUST BE LOCATED WITHIN ZONE INDICATED.
7. EXACT SHAPE AND SIZE OF THIS FEATURE IS OPTIONAL.
8. ALL DIMENSIONS ARE IN MILLIMETERS.
9. PACKAGE WARPAGE MAX 0.05mm.
10. APPLIED FOR EXPOSED PAD AND TERMINALS. EXCLUDE EMBEDDED PART OF EXPOSED PAD FROM MEASURING.
11. MEETS JEDEC MO220; EXCEPT DIMENSION "b".
12. APPLIED FOR EXPOSED PAD AND TERMINALS. EXCLUDE EMBEDDING PART OF EXPOSED PAD FROM MEASURING.
13. THIS PACKAGE OUTLINE APPLIES TO ANVIL SINGULATION (STEPPED SIDES).

Maxim cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim product. No circuit patent licenses are implied. Maxim reserves the right to change the circuitry and specifications without notice at any time.
