## OCTAL 3-STATE NONINVERTING D-TYPE TRANSPARENT LATCHES

### General Description

These devices are identical in pinout to the 54/74LS374. They contain eight D-type master/slave flip-flops with a common clock and clear. Data meeting the setup and hold time requirements are transferred to the 3-state outputs on the rising edge of the clock pulse. The output enable input does not affect the states of the flip-flops, but when output enable is high, the outputs are forced to the device is not selected. The HC/HCT 373 are identical in function to the HC/HCT 573 which have the input pins on the opposite side of the package from the output pins. They are similar in function to the HC/HCT 533 which have inverting outputs. These devices are characterized for operation over wide temperature ranges to meet industry and military specifications.

### Features

- Low Power consumption characteristic of CMOS devices
- Output drive capability: 15 LS TTL Loads Min.

- Low input current: 1 $\mu$ A Max.
- Low quiescent current: 80 $\mu$ A Max. (74HC)
- High noise immunity characteristic of CMOS
- Diode protection on all inputs
