

SN55111, SN75111 QUADRUPLE LINE DRIVERS WITH COMMON ENABLES

D3000, FEBRUARY 1986—REVISED OCTOBER 1988

- Similar to a Dual Version of the SN55109A/SN75109A Line Driver
- Improved Stability Over Supply Voltage and Temperature Ranges
- Constant-Current Outputs
- High Output Impedance
- High Common-Mode Output Voltage Range (−3 V to 10 V)
- Glitch-Free Power-Up/Power-Down Operation
- TTL Input Compatibility
- Common Enable Circuit

description

The SN55111 and SN75111 feature four line drivers with a common enable input. When the enable input is high, a constant output current is switched between each pair of output terminals in response to the logic level at that channel's input. When the enable is low, all channel outputs are nonconductive (transistors biased to cutoff). This feature minimizes loading in party-line systems where a large number of drivers share the same line.

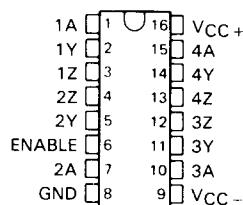

The driver outputs have a common-mode voltage range of −3 V to 10 V, allowing common-mode voltages on the line without affecting driver performance.

All outputs should be maintained within the recommended common-mode output voltage range to ensure that the channels do not interact with each other. To minimize power dissipation, all unused inputs should be grounded.

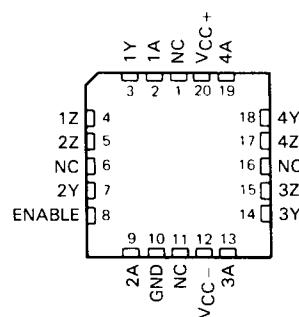

All inputs are diode clamped and are designed to satisfy TTL-system requirements. The inputs are tested at 2 V for high-logic-level input conditions and 0.8 V for low-logic-level input conditions. These tests guarantee 400 mV of noise margin when interfaced with Series 54/74 TTL.

The SN55111 is characterized for operation from −55 °C to 125 °C. The SN75111 is characterized for operation from 0 °C to 70 °C.
