CD54HC563/3A

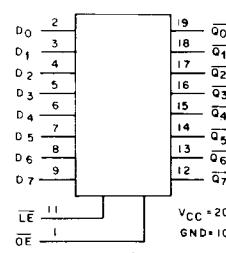

CD54HCT563/3A

Octal Transparent Latch, 3-State, Inverting

The RCA CD54HC/HCT563 are high-speed Octal Transparent Latches manufactured with silicon gate CMOS technology. They possess the low power consumption of standard CMOS integrated circuits, as well as the ability to drive 15 LSTTL devices.

The outputs are transparent to the inputs when the latch enable (\overline{LE}) is high. When the latch enable (\overline{LE}) goes low the data is latched. The output enable (\overline{OE}) controls the three-state outputs. When the output enable (\overline{OE}) is high the outputs will be in the high impedance state. The latch operation is independent of the state of the output enable.

The CD54HC533 and CD54HCT533 are identical in function to the CD54HC563 and CD54HCT563 but have different pinouts. The CD54HC533 and CD54HCT533 are similar to the CD54HC373 and CD54HCT373; the latter are non-inverting types.
