# SNx4LVC374A Octal Edge-Triggered D-Type Flip-Flops With 3-State Outputs

## 1 Features

- Operate From 1.65 V to 3.6 V
- Inputs Accept Voltages to 5.5 V
- Max $t_{pd}$ of 6.5 ns at 3.3 V
- Typical $V_{OLP}$ (Output Ground Bounce) <0.8 V at $V_{CC}$ = 3.3 V, $T_A$ = 25°C
- Typical $V_{OHV}$ (Output $V_{OH}$ Undershoot) >2 V at $V_{CC}$ = 3.3 V, $T_A$ = 25°C
- Support Mixed-Mode Signal Operation on All Ports (5-V Input/Output Voltage With 3.3-V $V_{CC}$)
- $I_{off}$ Supports Live Insertion, Partial-Power-Down Mode, and Back-Drive Protection
- Latch-Up Performance Exceeds 250 mA Per JESD 17
- ESD Protection Exceeds JESD 22
  - 2000-V Human-Body Model (A114-A)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged-Device Model (C101)

## 2 Applications

- Electronic Points of Sale
- TV Set-top Boxes
- Infotainment
- Servers
- Appliances

## 3 Description

The SN54LVC374A octal edge-triggered D-type flip-flop is designed for 2.7-V to 3.6-V $V_{CC}$ operation, and the SN74LVC374A octal edge-triggered D-type flip-flop is designed for 1.65-V to 3.6-V $V_{CC}$ operation.

**Device Information(1)**

| PART NUMBER | PACKAGE | BODY SIZE (NOM) |
|---|---|---|
| SNx4LVC374A | PDIP (20) | 25.40 mm x 6.35 mm |
| | VQFN (20) | 4.50 mm x 3.50 mm |
| | SOIC (20) | 12.80 mm x 7.50 mm |
| | SSOP (20) | 7.20 mm x 5.30 mm |
| | TVSOP (20) | 5.00 mm x 4.40 mm |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 5 Revision History

**Changes from Revision N (May 2005) to Revision O** **Page**

- Updated data sheet temperature range ... 1
- Updated $I_{off}$ bullet in Features list. ... 1
- Added Applications. ... 1
- Added Pin Functions table ... 3
- Added Handling Ratings table. ... 4
- Changed MAX operating temperature range from 85°C to 125°C in Recommended Operating Conditions table. ... 5
- Added Thermal Information table. ... 5
- Added –40°C TO 125°C for SN74LVC374A to Electrical Characteristics table. ... 6
- Added Timing Requirements table for SN74LVC374A at –40°C TO 125°C. ... 7
- Added Switching Characteristics table for SN74LVC374A –40°C TO 125°C. ... 8
- Added Typical Characteristics. ... 9
- Added Detailed Description section ... 11
- Added Applications and Implementation section. ... 12
- Added Power Supply Recommendations and Layout sections. ... 13

# 7 Specifications

## 7.1 Absolute Maximum Ratings(1)

over operating free-air temperature range (unless otherwise noted)

| | | | MIN | MAX | UNIT |
|---|---|---|---|---|---|
| $V_{CC}$ | Supply voltage range | | –0.5 | 6.5 | V |
| $V_I$ | Input voltage range(2) | | –0.5 | 6.5 | V |
| $V_O$ | Voltage range applied to any output in the high-impedance or power-off state(2) (3) | | –0.5 | 6.5 | V |
| $V_O$ | Voltage range applied to any output in the high or low state | | –0.5 | $V_{CC}$ + 0.5 | V |
| $I_{IK}$ | Input clamp current | $V_I$ < 0 | | –50 | mA |
| $I_{OK}$ | Output clamp current | $V_O$ < 0 | | –50 | mA |
| $I_O$ | Continuous output current | | | ±50 | mA |
| | Continuous current through $V_{CC}$ or GND | | | ±100 | mA |

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* are not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
(3) The value of $V_{CC}$ is provided in the recommended operating conditions table.

## 7.2 Handling Ratings

| | | | MIN | MAX | UNIT |
|---|---|---|---|---|---|
| $T_{stg}$ | Storage temperature range | | –65 | 150 | °C |
| $V_{(ESD)}$ | Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins(1) | 0 | 2 | kV |
| | | Charged device model (CDM), per JEDEC specification JESD22-C101, all pins(2) | 0 | 1000 | V |

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Pins listed as 500 V may actually have higher performance.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Pins listed as 250 V may actually have higher performance.

## 7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)(1)

| | | | SN54LVC374A | | SN74LVC374A | | UNIT |
|---|---|---|---|---|---|---|---|
| | | | MIN | MAX | MIN | MAX | |
| $V_{CC}$ | Supply voltage | Operating | 2 | 3.6 | 1.65 | 3.6 | V |
| | | Data retention only | 1.5 | | 1.5 | | |
| $V_{IH}$ | High-level input voltage | $V_{CC}$ = 1.65 V to 1.95 V | | | 0.65 × $V_{CC}$ | | V |
| | | $V_{CC}$ = 2.3 V to 2.7 V | | | 1.7 | | |
| | | $V_{CC}$ = 2.7 V to 3.6 V | 2 | | 2 | | |
| $V_{IL}$ | Low-level input voltage | $V_{CC}$ = 1.65 V to 1.95 V | | | | 0.35 × $V_{CC}$ | V |
| | | $V_{CC}$ = 2.3 V to 2.7 V | | | | 0.7 | |
| | | $V_{CC}$ = 2.7 V to 3.6 V | | 0.8 | | 0.8 | |
| $V_I$ | Input voltage | | 0 | 5.5 | 0 | 5.5 | V |
| $V_O$ | Output voltage | High or low state | 0 | $V_{CC}$ | 0 | $V_{CC}$ | V |
| | | 3-state | 0 | 5.5 | 0 | 5.5 | |
| $I_{OH}$ | High-level output current | $V_{CC}$ = 1.65 V | | | | –4 | mA |
| | | $V_{CC}$ = 2.3 V | | | | –8 | |
| | | $V_{CC}$ = 2.7 V | | –12 | | –12 | |
| | | $V_{CC}$ = 3 V | | –24 | | –24 | |
| $I_{OL}$ | Low-level output current | $V_{CC}$ = 1.65 V | | | | 4 | mA |
| | | $V_{CC}$ = 2.3 V | | | | 8 | |
| | | $V_{CC}$ = 2.7 V | | 12 | | 12 | |
| | | $V_{CC}$ = 3 V | | 24 | | 24 | |
| Δt/Δv | Input transition rise or fall rate | | | 10 | | 10 | ns/V |
| $T_A$ | Operating free-air temperature | | –55 | 125 | –40 | 125 | °C |

(1) All unused inputs of the device must be held at $V_{CC}$ or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, (SCBA004).

## 7.4 Thermal Information

| THERMAL METRIC(1) | | SN74LVC374A | UNIT |
|---|---|---|---|
| | | PW | |
| | | 20 PIN | |
| $R_{\theta JA}$ | Junction-to-ambient thermal resistance | 102.5 | °C/W |
| $R_{\theta JCtop}$ | Junction-to-case (top) thermal resistance | 35.9 | |
| $R_{\theta JB}$ | Junction-to-board thermal resistance | 53.5 | |
| $\psi_{JT}$ | Junction-to-top characterization parameter | 2.2 | |
| $\psi_{JB}$ | Junction-to-board characterization parameter | 52.9 | |

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, (SPRA953).

## 7.5 Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted)

| PARAMETER | TEST CONDITIONS | | $V_{CC}$ | SN54LVC374A | | | SN74LVC374A –40°C TO 85°C | | | SN74LVC374A –40°C TO 125°C | | | UNIT |

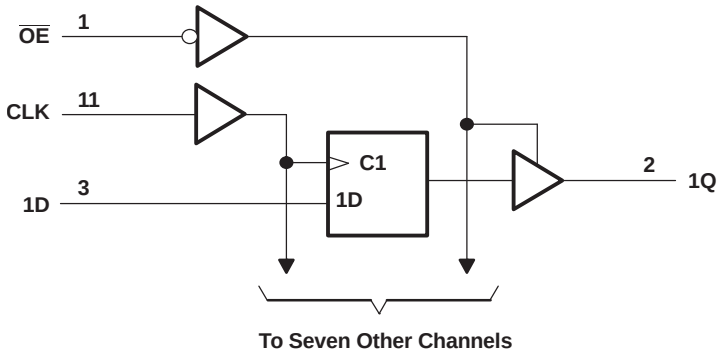
# 9 Detailed Description

## 9.1 Overview

These devices feature 3-state outputs designed specifically for driving highly capacitive or relatively low-impedance loads. These devices are particularly suitable for implementing buffer registers, input/output (I/O) ports, bidirectional bus drivers, and working registers. On the positive transition of the clock (CLK) input, the Q outputs are set to the logic levels set up at the data (D) inputs. A buffered output-enable ($\overline{OE}$) input can be used to place the eight outputs in either a normal logic state (high or low logic levels) or the high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and increased drive provide the capability to drive bus lines without interface or pullup components. $\overline{OE}$ does not affect internal operations of the latch. Old data can be retained or new data can be entered while the outputs are in the high-impedance state. Inputs can be driven from either 3.3-V or 5-V devices. This feature allows the use of these devices as translators in a mixed 3.3-V/5-V system environment. These devices are fully specified for partial-power-down applications using $I_{off}$. The $I_{off}$ circuitry disables the outputs, preventing damaging current backflow through the devices when they are powered down. To ensure the high-impedance state during power up or power down, $\overline{OE}$ should be tied to $V_{CC}$ through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

## 9.2 Functional Block Diagram



## 9.3 Feature Description

- Wide operating voltage range
  - Operates from 1.65 V to 3.6 V
- Allows down voltage translation
  - Inputs accept voltages to 5.5 V
- $I_{off}$ feature
  - Allows voltages on the inputs and outputs when $V_{CC}$ is 0 V

## 9.4 Device Functional Modes

**Function Table (Each Flip-Flop)**

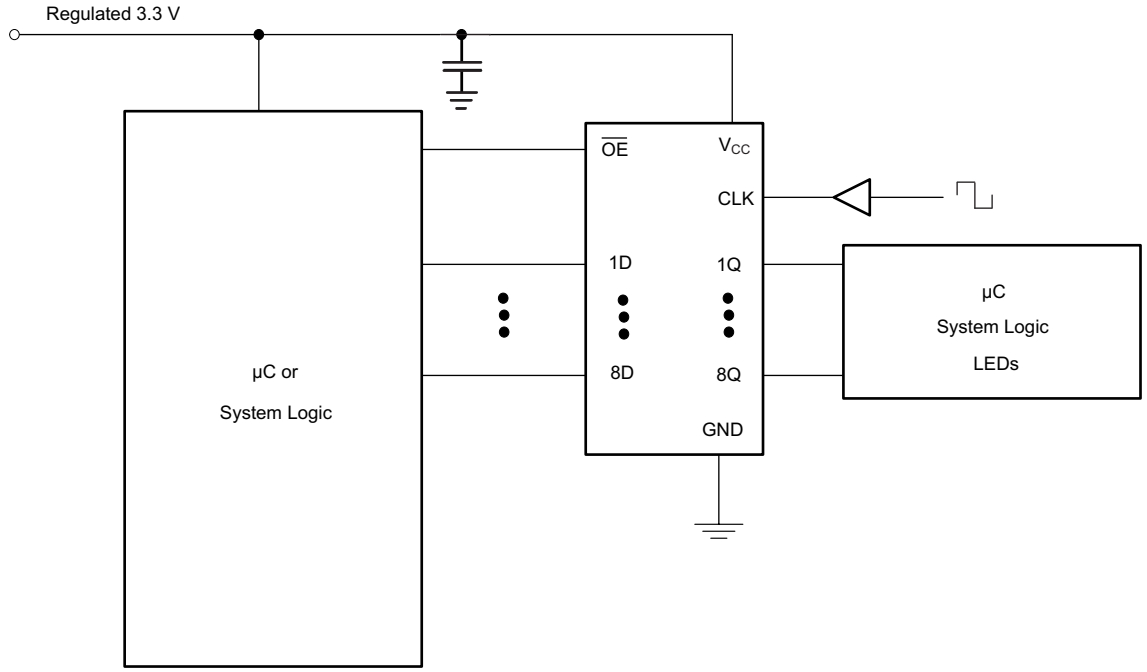
| INPUTS | | | OUTPUT |
|---|---|---|---|
| $\overline{OE}$ | CLK | D | Q |
| L | ↑ | H | H |
| L | ↑ | L | L |
| L | H or L | X | $Q_0$ |
| H | X | X | Z |

# 10 Applications and Implementation

## 10.1 Application Information

The SN74LVC374A is a high-drive CMOS device that can be used for a multitude of bus interface type applications where the data needs to be retained or latched. It can produce 32 mA of drive current at 3.3 V; therefore, making it ideal for driving multiple outputs and good for high speed applications up to 100 MHz. The inputs are 5.5-V tolerant allowing it to translate down to $V_{CC}$.

## 10.2 Typical Application



### 10.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. Care should be taken to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads so routing and load conditions should be considered to prevent ringing.

### 10.2.2 Detailed Design Procedure

1. Recommended Input conditions
   - Rise time and fall time specs: See (Δt/ΔV) in *Recommended Operating Conditions* table.
   - Specified high and low levels: See ($V_{IH}$ and $V_{IL}$) in *Recommended Operating Conditions* table.
   - Inputs are overvoltage tolerant allowing them to go as high as 5.5 V at any valid $V_{CC}$.
2. Recommend output conditions
   - Load currents should not exceed 25 mA per output and 50 mA total for the part.
   - Outputs should not be pulled above $V_{CC}$.

## Typical Application (continued)

### 10.2.3 Application Curves

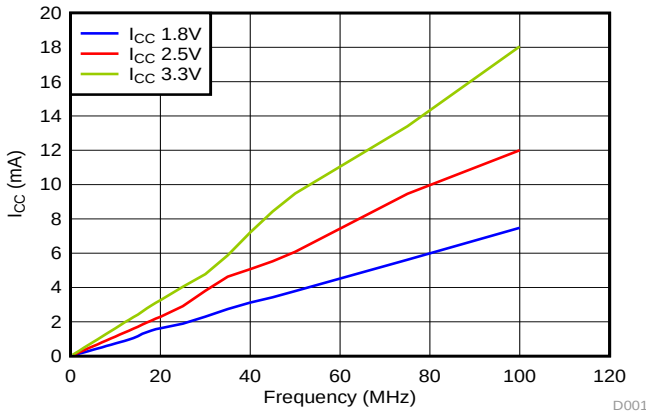


**Figure 4. $I_{CC}$ vs Frequency**

## 11 Power Supply Recommendations

The power supply can be any voltage between the Min and Max supply voltage rating located in the *Recommended Operating Conditions* table.

Each $V_{CC}$ pin should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1-µF capacitor is recommended. If there are multiple $V_{CC}$ pins, then a 0.01-µF or 0.022-µF capacitor is recommended for each power pin. It is ok to parallel multiple bypass capacitors to reject different frequencies of noise. A 0.1-µF and 1-µF capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power pin as possible for best results.

## 12 Layout

### 12.1 Layout Guidelines

When using multiple bit logic devices inputs should not ever float. In many cases, functions or parts of functions of digital logic devices are unused, for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such input terminals should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. Figure 5 shows the rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that should be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or $V_{CC}$ whichever makes more sense or is more convenient. It is generally acceptable to float outputs unless the part is a transceiver. If the transceiver has an output enable terminal it will disable the outputs section of the part when asserted. This will not disable the input section of the IOs so they also cannot float when disabled.

### 12.2 Layout Example

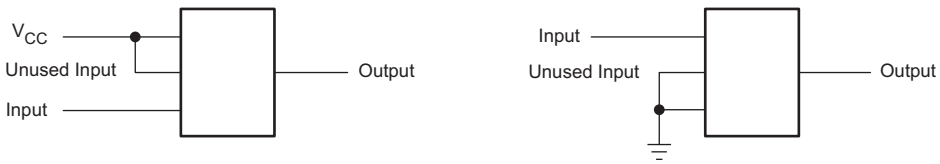

**Figure 5. Layout Diagram**

# 13 Device and Documentation Support

## 13.1 Related Links

The table below lists quick access links. Categories include technical documents, support and community resources, tools and software, and quick access to sample or buy.

**Table 1. Related Links**

## 13.2 Trademarks

All trademarks are the property of their respective owners.

## 13.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

## 13.4 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

# 14 Mechanical, Packaging, and Orderable Information

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:
**ACTIVE:** Product device recommended for new designs.
**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.
**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
