

GD54/74HC157, GD54/74HCT157

QUAD 2-INPUT SELECTORS/MULTIPLEXERS WITH NONINVERTED OUTPUT

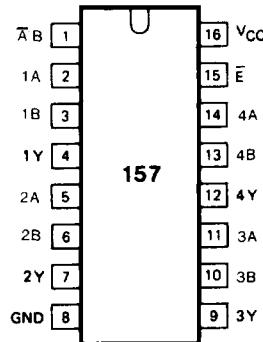

General Description

These devices are identical in pinout to the 54/74LS157. They consist of four 2-input multiplexers with common select and enable inputs, and noninverted outputs. When the enable input is low, the four outputs assume the value as selected from the inputs, when the enable input is high, the output become low regardless of any other inputs values. Select decoding is done internally resulting in a single select input only. The HC/HCT 158 operates in the same manner, except that its outputs are in inverted form. The HC/HCT 157 is similar in function to the HC/HCT 257 and 258 which have 3-state outputs. These devices are characterized for operation over wide temperature ranges to meet industry and military specifications.

Features

- Low Power consumption characteristic of CMOS devices
- Output drive capability: 10 LS TTL Loads Min.
- Operating speed superior to LS TTL
- Wide operating voltage range: for HC 2 to 6 volts for HCT 4.5 to 5.5 volts
- Low input current: $1\mu A$ Max.
- Low quiescent current: $80\mu A$ Max. (74HC)
- High noise immunity characteristic of CMOS
- Diode protection on all inputs

Pin Configuration

Suffix-Blank : Plastic Dual In Line Package
 Suffix-J : Ceramic Dual In Line Package
 Suffix-D : Small Outline Package
