description

These octal buffers/drivers are designed for 2-V to 5.5-V V_{CC} operation.

The 'LV240A devices are designed specifically to improve both the performance and density of 3-state memory address drivers, clock drivers, and bus-oriented receivers and transmitters.

These devices are organized as two 4-bit buffers/line drivers with separate output-enable (\overline{OE}) inputs. When \overline{OE} is low, the device passes data from the A inputs to the Y outputs. When \overline{OE} is high, the outputs are in the high-impedance state.

The SN54LV240A is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74LV240A is characterized for operation from -40°C to 85°C .
