

GD54/74LS151

DATA SELECTOR/MULTIPLEXER

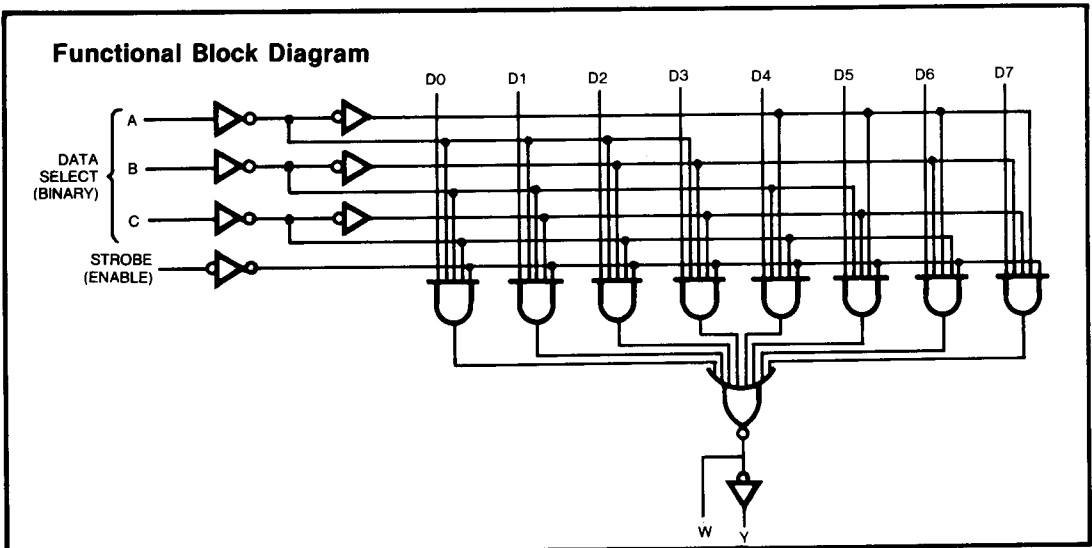

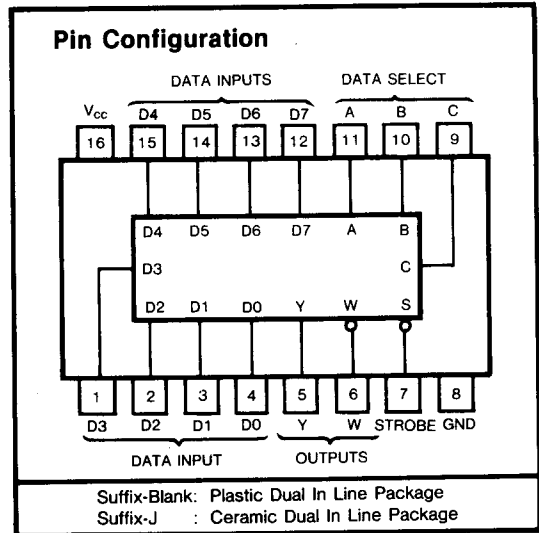

Features

- Select one-of-eight data lines
- Performs parallel-to-serial conversion
- Permits multiplexing from N lines to one line
- Also for use Boolean function generator

Description

This data selector/multiplexer contains full on-chip decoding to select the desired data source. The LS151 selects one-of-eight data sources. The LS151 has a strobe input which must be at a low logic level to enable these devices. A high level at the strobe forces the W output high, and the Y output low.

The LS151 features complementary W and Y outputs.

Note 2: Not more than one output should be shorted at a time, and the duration should not exceed one second.

Note 3: I_{CC} is measured with all outputs open, strobe and data select inputs at 4.5V, and all other inputs open.
