### SN74ALVC16600 **18-BIT UNIVERSAL BUS TRANSCEIVER** WITH 3-STATE OUTPUTS

SCAS263 - JANUARY 1993 - REVISED MARCH 1994

# DGG OR DL PACKAGE

- (TOP VIEW)
- UBT™ (Universal Bus Transceiver) Combines D-Type Latches and D-Type Flip-Flops for Operation in Transparent. Latched, Clocked, or Clock-Enabled Mode

Member of the Texas Instruments

Widebus™ Family

- EPIC™ (Enhanced-Performance Implanted) **CMOS) Submicron Process**
- Designed to Facilitate Incident-Wave Switching for Line Impedances of 50  $\Omega$ or Greater
- Typical V<sub>OLP</sub> (Output Ground Bounce) < 0.8 V at V<sub>CC</sub> = 3.3 V, T<sub>A</sub> = 25°C
- Typical V<sub>OHV</sub> (Output V<sub>OH</sub> Undershoot) > 2 V at V<sub>CC</sub> = 3.3 V, T<sub>A</sub> = 25°C
- Bus-Hold On Data Inputs Eliminates the Need for External Pullup/Pulldown Resistors
- Package Options Include Plastic 300-mil Shrink Small-Outline (DL) and Thin Shrink Small-Outline (DGG) Packages

#### description

This 18-bit universal bus transceiver is designed for 2.7-V to 3.6-V V<sub>CC</sub> operation.

The SN74ALVC16600 combines D-type latches and D-type flip-flops to allow data flow in transparent, latched, and clocked modes.

Data flow in each direction is controlled by output-enable (OEAB and OEBA), latch-enable (LEAB and LEBA), and clock (CLKAB and

OEAB [	I₁ ∪	56 CLKENAB
LEAB [		55 CLKAB
A1 [	3	54 B1

GND [		32 [] GND
A18 [		31 B18
OEBA [		30 CLKBA
LEBA [	28	29 T CLKENBA

CLKBA) inputs. The clock can be controlled by the clock-enable (CLKENAB and CLKENBA) inputs. For A-to-B data flow, the device operates in the transparent mode when LEAB is high. When LEAB is low, the A data is latched if CLKAB is held at a high or low logic level. If LEAB is low, the A-bus data is stored in the latch/flip-flop on the high-to-low transition of CLKAB. Output enable OEAB is active low. When OEAB is low, the outputs are active. When OEAB is high, the outputs are in the high-impedance state.

Data flow for B to A is similar to that of A to B but uses OEBA, LEBA, CLKBA, and CLKENBA.

The SN74ALVC16600 is available in TI's shrink small-outline (DL) and thin shrink small-outline (DGG) packages, which provide twice the I/O pin count and functionality of standard small-outline packages in the same printed-circuit-board area.

The SN74ALVC16600 is characterized for operation from -40°C to 85°C.

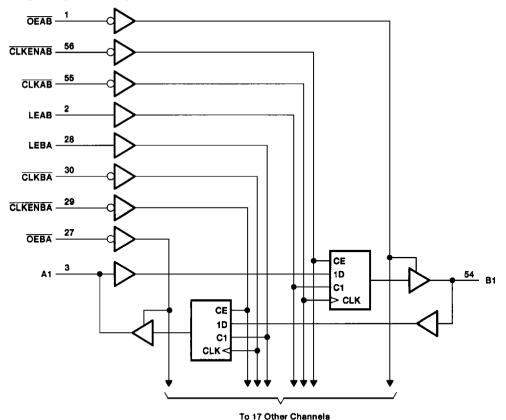

EPIC, UBT, and Widebus are trademarks of Texas Instruments Incorporated.

**FUNCTION TABLET** 

7 511 511 511 511 511

- † A-to-B data flow is shown: B-to-A flow is similar but uses  $\overline{\text{OEBA}}$ , LEBA,  $\overline{\text{CLKBA}}$ , and  $\overline{\text{CLKENBA}}$ .
- Output level before the indicated steady-state input conditions were established.
- Output level before the indicated steady-state input conditions were established, provided that CLKAB was low before LEAB went low.

#### logic diagram (positive logic)

## SN74ALVC16600 18-BIT UNIVERSAL BUS TRANSCEIVER WITH 3-STATE OUTPUTS

SCAS263 - JANUARY 1993 - REVISED MARCH 1994

# absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V <sub>CC</sub>	0.5 V to 4.6 V
Input voltage range, VI (except I/O ports) (see Note 1	)0.5 V to 4.6 V
Input voltage range, V <sub>I</sub> (I/O ports) (see Notes 1 and 2	e)0.5 V to V <sub>CC</sub> + 0.5 V
Output voltage range, VO (see Notes 1 and 2)	0.5 V to V <sub>CC</sub> + 0.5 V
Input clamp current, $I_{IK}$ ( $V_I < 0$ )	–50 mA
Output clamp current, $I_{OK}$ ( $V_O < 0$ or $V_O > V_{CC}$ )	±50 mA
Continuous output current, $I_O$ ( $V_O = 0$ to $V_{CC}$ )	±50 mA
Continuous current through V <sub>CC</sub> or GND	±100 mA
Maximum power dissipation at $T_A = 55$ °C (in still air)	(see Note 3): DGG package 1 W
	DL package 1.4 W
Storage temperature range	−65°C to 150°C

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

2. This value is limited to 4.6 V maximum.

3. The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 750 mils. For more information, refer to the *Package Thermal Considerations* application note.

#### recommended operating conditions

			MIN	MAX	UNIT
VCC	Supply voltage		2.7	3.6	٧
