

SN55ALS126, SN75ALS126 QUADRUPLE LINE DRIVERS

D2299, FEBRUARY 1986—REVISED OCTOBER 1989

- Meets IBM 360/370 I/O Interface Specification GA22-6974-3 (Also See SN55ALS130 and SN75ALS130)
- Minimum Output Voltage of 3.11 V at $I_{OH} = -60 \text{ mA}$
- Fault Flag Circuit Output Signals Driver Output Fault
- Fault-Detection Current Limit Circuit Minimizes Power Dissipation During a Fault Condition
- Advanced Low-Power Schottky Circuitry
- Dual Common Enable
- Individual Fault Flags
- Designed to Be an Improved Replacement for the MC3481

description

The SN55ALS126 and SN75ALS126 quadruple line drivers are designed to meet the IBM 360/370 I/O specification GA22-6974-3. The output voltage is 3.11 V minimum (at $I_{OH} = -59.3 \text{ mA}$) over the recommended ranges of supply voltage (4.5 V to 5.95 V) and temperature. Driver outputs use a fault-detection current-limit circuit to allow high drive current but still minimize power dissipation when the output is shorted to ground. The SN55ALS126 and SN75ALS126 are compatible with standard TTL logic and supply voltages.

The SN55ALS126 and SN75ALS126 employ the IMPACT™ process to achieve fast switching speeds and low power dissipation. Fault-flag circuitry is designed to sense and signal a line short on any Y line. Upon detecting an output fault condition, the fault-flag circuit forces the driver output into a low state and signals a fault condition by causing the fault-flag output to go low.

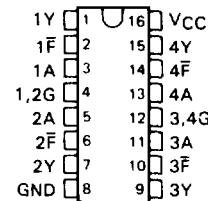

The SN55ALS126 and SN75ALS126 can drive a 50Ω load as required in the IBM GA22-6974-3 specification or a 90Ω load as used in many I/O systems. Optimum performance can be achieved when the devices are used with either the SN75125, SN75127, SN75128, or SN75129 line receivers.

The SN55ALS126 is characterized for operation from -55°C to 125°C , and the SN75ALS126 is characterized for operation from 0°C to 70°C .
