

TYPES SN54AS877, SN74AS877 8-BIT UNIVERSAL TRANSCEIVER PORT CONTROLLERS

D2661, DECEMBER 1982—REVISED DECEMBER 1983

- Included among the Package Options Are Compact, 24-Pin, 300-mil-Wide Dips and Both 28-Pin Plastic and Ceramic Chip Carriers
- Buffered 3-State Outputs Drive Bus Lines Directly
- Cascadable to n-Bits
- Eight Selectable Transceiver/Port Functions:
 - A to B or B to A
 - Register to A or Register to B
 - Shifted to A or Shifted to B
 - Off-Line Shifts (A and B Ports in High-Impedance State)
 - Register Clear
- Particularly Suitable for Use in Signature-Analysis Circuitry
- Serial Register Provides:
 - Parallel Storage of Either A or B Input Data
 - Serial Transmission of Data from Either A or B Port
- Dependable Texas Instruments Quality and Reliability

NC — No internal connection

description

The 'AS877 features two 8-bit I/O ports (A1-A8 and B1-B8), an 8-bit parallel-load, serial-in, parallel-out shift register, and control logic. With these features, this device is capable of performing eight selectable transceiver or port functions, depending on the state of the three select lines S0, S1, and S2. These functions include: transferring data from port A to port B or vice versa (i.e., the transceiver function), transferring data from the register to either port, serial shifting data to either port, performing off-line shifts (with A and B ports in high-impedance state), and clearing the register. Synchronous parallel loading of the internal register can be accomplished from either port on the positive transition of the clock while serially shifting data in via the SERIN input. The 'AS877 is ideally suited for applications needing signature-analysis circuitry to enhance system verification and/or fault analysis. All serial data is shifted right. All outputs are buffer-type outputs designed specifically to drive bus lines directly and all are 3-state except for Q8, which is a totem-pole output.

The SN54AS877 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74AS877 is characterized for operation from 0°C to 70°C .

n = level of Q_n (n = 1, 2, . . . 8) established on most recent ↑ transition of CLK. Q1 thru Q8 are the shift register outputs; only Q8 is available externally. The double inversions that take place as data travels from port to port are ignored in this table.
