QUADRUPLE 2-INPUT POSITIVE-NAND GATES WITH OPEN-Drain Outputs

D2804, MARCH 1984—REVISED SEPTEMBER 1987

- Package Options Include Plastic "Small Outline" Packages, Ceramic Chip Carriers, and Standard Plastic and Ceramic 300-mil DIPs
- Dependable Texas Instruments Quality and Reliability

description

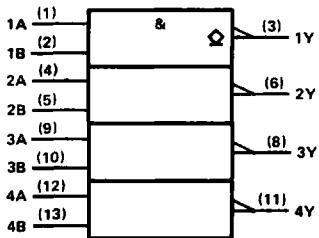

These devices contain four independent 2-input NAND gates. They perform the Boolean functions $Y = A \cdot B$ or $Y = \bar{A} + \bar{B}$ in positive logic. The open-drain outputs require pull-up resistors to perform correctly. They may be connected to other open-drain outputs to implement active-low wired-OR or active-high wired-AND functions.

The SN54HC03 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74HC03 is characterized for operation from -40°C to 85°C .

[†]Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
