## OCTAL D-TYPE TRANSPARENT LATCHES WITH 3-STATE OUTPUTS

D2804, MARCH 1984—REVISED SEPTEMBER 1987

- Inputs are TTL-Voltage Compatible
- 8 High-Current Latches in a Single Package
- High-Current 3-State True Outputs Can Drive Up to 15 LSTTL Loads
- Full Parallel Access for Loading
- Package Options Include Plastic "Small Outline" Packages, Ceramic Chip Carriers, and Standard Plastic and Ceramic 300-mil DIPs
- Dependable Texas Instruments Quality and Reliability

### description

These 8-bit latches feature three-state outputs designed specifically for driving highly capacitive or relatively low-impedance loads. They are particularly suitable for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.

The eight latches of the 'HCT373 are transparent D-type latches. While the enable (C) is high the Q outputs will follow the data (D) inputs. When the enable is taken low, the Q outputs will be latched at the levels that were set at the D inputs.

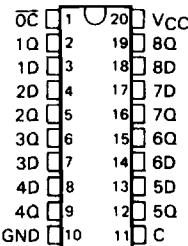

An output-control input ( $\bar{OC}$ ) can be used to place the eight outputs in either a normal logic state (high or low logic levels) or a high-impedance state. In the high-impedance state the outputs neither load nor drive the bus lines significantly. The high-impedance third state and increased drive provide the capability to drive the bus lines in a bus-organized system without need for interface or pull-up components.

The output control ( $\bar{OC}$ ) does not affect the internal operations of the latches. Old data can be retained or new data can be entered while the outputs are off.

The SN54HCT373 is characterized for operation over the full military temperature range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The SN74HCT373 is characterized for operation from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .

### absolute maximum ratings over operating free-air temperature range<sup>†</sup>

|                                                                                                       |                |
|-------------------------------------------------------------------------------------------------------|----------------|
| Supply voltage, V <sub>CC</sub> .....                                                                 | -0.5 V to 7 V  |
| Input clamp current, I <sub>IK</sub> (V <sub>I</sub> < 0 or V <sub>I</sub> > V <sub>CC</sub> ) .....  | ±20 mA         |
| Output clamp current, I <sub>OK</sub> (V <sub>O</sub> < 0 or V <sub>O</sub> > V <sub>CC</sub> ) ..... | ±20 mA         |
| Continuous output current, I <sub>O</sub> (V <sub>O</sub> = 0 to V <sub>CC</sub> ) .....              | ±35 mA         |
| Continuous current through V <sub>CC</sub> or GND pins .....                                          | ±70 mA         |
| Lead temperature 1.6 mm (1/16 in) from case for 60 s: FK or J package .....                           | 300°C          |
| Lead temperature 1.6 mm (1/16 in) from case for 10 s: DW or N package .....                           | 260°C          |
| Storage temperature range .....                                                                       | -65°C to 150°C |

<sup>†</sup>Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
