

TYPES SN54ALS35, SN74ALS35 HEX NONINVERTERS WITH OPEN-COLLECTOR OUTPUTS

D2661, DECEMBER 1983

- Noninverters with Open-Collector Outputs
- Package Options Include Both Plastic and Ceramic Chip Carriers in Addition to Plastic and Ceramic DIPs
- Dependable Texas Instruments Quality and Reliability

description

These devices contain six independent noninverters. They perform the Boolean functions $Y = A$. The open-collector outputs require pull-up resistors to perform correctly. They may be connected to other open-collector outputs to implement active-low wired-OR or active-high wired-AND functions. Open-collector devices are often used to generate higher V_{OH} levels.

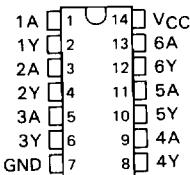

The SN54ALS35 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74ALS35 is characterized for operation from 0°C to 70°C .
