TOSHIBA CMOS Digital Integrated Circuit Silicon Monolithic

TC74HC259AP,TC74HC259AF,TC74HC259AFN

8-Bit Addressable Latch

The TC74HC259A is a high speed CMOS ADDRESSABLE LATCH fabricated with silicon gate C²MOS technology.

It achieve the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

The respective bits are controlled by address inputs A, B, and C. When \overline{CLEAR} input is held high and enable input G is held low, the data is written into the bit selected by address inputs, the other bit hold their previous conditions.

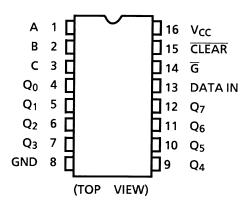

When both $\overline{\text{CLEAR}}$ and $\overline{\text{G}}$ held high, writing of all bits is inhibited regardless of adress inputs, and their previous condition are held. When $\overline{\text{CLEAR}}$ is held low and $\overline{\text{G}}$ is held high, all bits are resent to low regardless of the other inputs. When both of $\overline{\text{CLEAR}}$ and $\overline{\text{G}}$ held low, all bits which isn't selected by adress inputs are resent to low.

All inputs are equipped with protection circuits against static discharge or transient excess voltage.

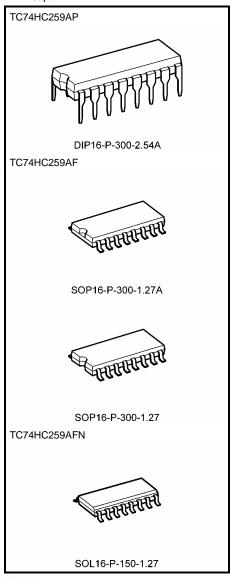

Features

- High speed: $t_{pd} = 15 \text{ ns (typ.)}$ at $V_{CC} = 5 \text{ V}$
- Low power dissipation: $I_{CC} = 4 \mu A \text{ (max)}$ at $T_{a} = 25 \text{°C}$
- High noise immunity: V_{NIH} = V_{NIL} = 28% V_{CC} (min)
- Output drive capability: 10 LSTTL loads
- Symmetrical output impedance: |IOH| = IOL = 4 mA (min)
- Balanced propagation delays: $t_pLH \simeq t_pHL$
- Wide operating voltage range: VCC (opr) = 2~6 V
- Pin and function compatible with 74LS259

Pin Assignment

Note: xxxFN (JEDEC SOP) is not available in Japan.

System Diagram

Absolute Maximum Ratings (Note 1)

Characteristics	Symbol	Rating	Unit
Supply voltage range	V _{CC}	-0.5~7.0	V
DC input voltage	V _{IN}	-0.5~V _{CC} + 0.5	V
DC output voltage	Vout	-0.5~V _{CC} + 0.5	V
Input diode current	I _{IK}	±20	mA
Output diode current	lok	±20	mA
DC output current	lout	±25	mA
DC V _{CC} /ground current	Icc	±50	mA
Power dissipation	PD	500 (DIP) (Note 2)/180 (SOP)	mW
Storage temperature	T _{stg}	-65~150	°C

Note 1: Exceeding any of the absolute maximum ratings, even briefly, lead to deterioration in IC performance or even destruction.

Note 2: 500 mW in the range of $Ta = -40\sim65$ °C. From Ta = 65 to 85 °C a derating factor of -10 mW/°C should be applied until 300 mW.

Recommended Operating Conditions (Note)

Characteristics	Symbol	Rating	Unit
Supply voltage	V _{CC}	2~6	٧
Input voltage	V _{IN}	0~V _{CC}	V
Output voltage	V _{OUT}	0~V _{CC}	V
Operating temperature	T _{opr}	-40~85	°C
		0~1000 (V _{CC} = 2.0 V)	
Input rise and fall time	t _r , t _f	0~500 (V _{CC} = 4.5 V)	ns
		0~400 (V _{CC} = 6.0 V)	

Note: The recommended operating conditions are required to ensure the normal operation of the device.
Unused inputs must be tied to either VCC or GND.

- The information contained herein is subject to change without notice. 021023_D
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
 In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc. 021023_A
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk. 021023_B
- The products described in this document shall not be used or embedded to any downstream products of which
 manufacture, use and/or sale are prohibited under any applicable laws and regulations. 060106_Q
- The information contained herein is presented only as a guide for the applications of our products. No
 responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which
 may result from its use. No license is granted by implication or otherwise under any patent or patent rights of
 TOSHIBA or others. 021023_c
