description

This 3-line to 8-line decoder/demultiplexer with latches on three address inputs is designed for 1.65-V to 3.6-V V_{CC} operation.

The SN74LVC137A is designed for high-performance memory-decoding or data-routing applications requiring very short propagation delay times. In high-performance memory systems, this decoder can be used to minimize the effects of system decoding. When employed with high-speed memories utilizing a fast enable circuit, the delay times of this decoder and the enable time of the memory are usually less than the typical access time of the memory. This means that the effective system delay introduced by the decoder is negligible.

When the latch-enable ($\overline{G2A}$) input is low, the SN74LVC137A acts as a decoder/demultiplexer. When $\overline{G2A}$ transitions from low to high, the address present at the inputs (A, B, and C) is stored in the latches. Further address changes are ignored, provided $\overline{G2A}$ remains high. The output-enable (G1 and $\overline{G2B}$) inputs control the outputs independently of the select or latch-enable inputs. All of the outputs are forced high if G1 is low or $\overline{G2B}$ is high.

Inputs can be driven from either 3.3-V or 5-V devices. This feature allows the use of these devices as translators in a mixed 3.3-V/5-V system environment.

The SN74LVC137A is characterized for operation from –40°C to 85°C.

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
2. The value of V_{CC} is provided in the recommended operating conditions table.
3. The package thermal impedance is calculated in accordance with JESD 51.
