

TYPES SN54ALS1005, SN74ALS1005 HEX INVERTING BUFFERS WITH OPEN-COLLECTOR OUTPUTS

D2661, APRIL 1982—REVISED DECEMBER 1983

- Buffer Version of 'ALS05
- Package Options Include Both Plastic and Ceramic Chip Carriers in Addition to Plastic and Ceramic DIPs
- Dependable Texas Instruments Quality and Reliability

description

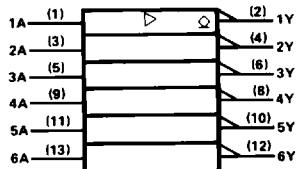

These devices contain six independent inverting buffers. They perform the Boolean function $Y = \bar{A}$. The open-collector outputs require pull-up resistors to perform correctly. They may be connected to other open-collector outputs to implement active-low wired-OR or active-high wired-AND functions. Open-collector devices are often used to generate higher V_{OH} levels.

The SN54ALS1005 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74ALS1005 is characterized for operation from 0°C to 70°C .
