## DESCRIPTION

The LVC240A is an 8-bit buffer/line drivers with three-state outputs that is ideal for driving high capacitance loads such as memory address and data buses. The 3.3V LVC family features low power, low switching noise, and fast switching speeds for low power portable applications as well as high-end, advanced workstation applications. 5V tolerant inputs and outputs allow these LVC products to be used in mixed 5V and 3.3V applications. To accommodate hot-plug or live insertion applications, these products are designed not to load an active bus when  $V_{\text{CC}}$  is removed.
