## SN54ACT16245, 74ACT16245 16-BIT BUS TRANSCEIVERS WITH 3-STATE OUTPUTS

SCAS097B - DECEMBER 1989 - REVISED APRIL 1996

- Members of the Texas Instruments Widebus™ Family
- Inputs Are TTL-Voltage Compatible
- 3-State Outputs Drive Bus Lines Directly
- Flow-Through Architecture Optimizes PCB Layout
- Distributed V<sub>CC</sub> and GND Configuration to Minimize High-Speed Switching Noise
- EPIC™ (Enhanced-Performance Implanted CMOS) 1-µm Process
- 500-mA Typical Latch-Up Immunity at 125°C
- Package Options Include Plastic 300-mil Shrink Small-Outline (DL) Packages Using 25-mil Center-to-Center Pin Spacings, Thin Shrink Small-Outline (DGG) Packages, and 380-mil Fine-Pitch Ceramic Flat (WD) Packages Using 25-mil Center-to-Center Pin Spacings

### description

The SN54ACT16245 and 74ACT16245 are 16-bit bus transceivers organized as dual-octal noninverting 3-state transceivers and designed for asynchronous two-way communication between data buses. The control-function implementation minimizes external timing requirements.

|                   |    |               |                 |

The devices allow data transmission from the A bus to the B bus or from the B bus to the A bus, depending on the logic level at the direction-control (DIR) input. The enable  $(\overline{G})$  input can be used to disable the devices so that the buses are effectively isolated.

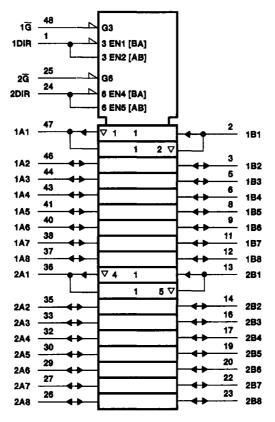

The SN54ACT16245 is characterized for operation over the full military temperature range of –55°C to 125°C. The 74ACT16245 is characterized for operation from –40°C to 85°C.

## logic symbolt

<sup>†</sup> This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

### logic diagram (positive logic)

## absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

| Supply voltage, V <sub>CC</sub>  | •••••               | 0.5 V to 7 V |
|--|---------------------|--------------|
| Input voltage range, V <sub>I</sub> (see Note 1)   |                     |              |
| Output voltage range, VO (see Note 1)  |                     |              |
| Input clamp current, I <sub>IK</sub> (V <sub>I</sub> < 0 or V <sub>I</sub> > V <sub>CC</sub> ) |                     | ±20 mA       |
| Output clamp current, IOK (VO < 0 or VO > VCC)   |                     |              |
| Continuous output current, IO (VO = 0 to VCC)  |                     | ±50 mA       |
| Continuous current through V <sub>CC</sub> or GND  |                     | ±400 mA      |
| Maximum power dissipation at TA = 55°C (in still air) (see No                                  | ote 2): DGG package | 0.85 W       |
| •  | DL package          | 1.2 W        |
| Storage temperature range, Teta  |                     |              |

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

#### recommended operating conditions (see Note 3)

| Δt/Δν | Input transition rise or fall rate | 0            | 10  | 0     | 10   | ns/V     |
| TA    | Operating free-air temperature     | -55          | 125 | -40   | 85   | ပ္       |

NOTES: 3. Unused inputs should be tied to V<sub>CC</sub> through a pullup resistor of approximately 5 kΩ or greater to keep them from floating.

4. All VCC and GND pins must be connected to the proper voltage power supply.

NOTES: 1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

<sup>2.</sup> The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 750 mils.

## operating characteristics, $V_{CC} = 5 \text{ V}$ , $T_A = 25^{\circ}\text{C}$

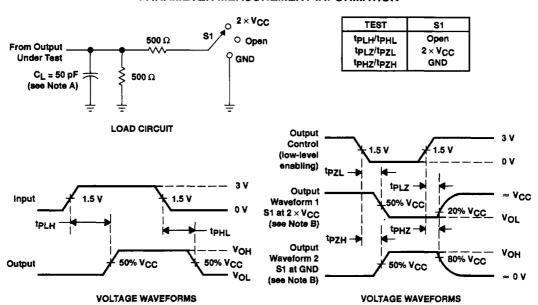

|   | PARAMETER                                     |                   |                      | TEST CONDITIONS    |    |    |
|---|---|-------------------|----------------------|--------------------|----|----|
| C <sub>pd</sub> Power dissipation capacitance per transceiver | Outputs enabled                               | C. FO. T. 1 1 MHs |                      | 52                 | nE |    |
|   | Power dissipation capacitance per transceiver | Outputs disabled  | CL = 50 pr, 1= 1 MHZ | = 50 pF, f = 1 MHz | 10 | p⊦ |

For I/O ports, the parameter IOZ includes the input leakage current II.

This is the increase in supply current for each input that is at one of the specified TTL voltage levels rather than 0 V or VCC.

#### PARAMETER MEASUREMENT INFORMATION

NOTES: A. C<sub>L</sub> includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR ≤ 1 MHz, Z<sub>Q</sub> = 50 Ω, t<sub>r</sub> = 3 ns, t<sub>f</sub> = 3 ns.
- D. The outputs are measured one at a time with one input transition per measurement.

Figure 1. Load Circuit and Voltage Waveforms
